[1] Biodome is a Moroccan company that builds plants for the production of cooking gas by recycling waste in farms. The founder, Fatima Zahra Beraich, solves the problem of organic waste in rural areas through recycling. She contributes to the production of energy by turning waste into green energy for farmers.

[2] Founded in 2017, Biodome is the result of Fatima Zahra's love for chemistry and her business skills in solving waste and energy problems. At university, Fatima Zahra studied how waste breaks down naturally and changes into gas.

[3] "I've always been interested in waste management," she says. Before thinking globally, Fatima wanted her waste treatment business to respond to the needs of the local people. In the beginning, she faced many challenges, such as lack of money and technical assistance. With financial support from European Union programs like The Next Society, Fatima Zahra has managed to make her waste treatment technology affordable and more sustainable. "The treated waste has two uses. First, it becomes an agricultural fertilizer, and, second, it produces cooking gas for people," she explains.

[4] Biodome is proud to rely 100% on local engineers and workers. With their expertise, they build underground domes to produce gas on farms. They also have bags which turn waste into gas on the ground. The system can generate almost 4 hours of cooking gas per day and make fertilizers that farmers can use in their farms or sell. This helps **them** both to save money and earn more. The system can process 0 kg to 2 tons of waste each week.

[5] Convincing farmers to try this new technology was not easy. One of the first users of this technology, Zakaria Rachid, saw big results. The money he used to spend on buying fertilizers dropped by 50%, and his farm productivity went up. "I was amazed the first time I turned on my gas stove thanks to the energy produced from waste!" he says. Now, he encourages other farmers to use this system.

[6] Besides farmers, Biodome works with schools and businesses. **The company** is also working overseas in countries such as Ivory Coast. "We want to make this technology affordable and easy to use," Fatima Zahra says. She hopes to see Biodome spread across Africa, helping the environment and the people.

Model answers (any appropriate answer is accepted)

Task 1: There are many reasons why people should respect teachers. First, teachers give us knowledge and teach us how to think, so they help us build our future. Second, they work hard every day to prepare lessons and to help every student, even the weakest ones. Moreover, teachers guide us and teach us good values such as honesty and respect for others. Finally, a society that respects its teachers has better schools and better citizens. For all these reasons, we should always respect and thank our teachers.

Task 2: My Country: What Makes it Special! Morocco is a unique country, and I am proud to live here. First of all, our food is famous all over the world. Couscous on Fridays and mint tea with the family are traditions that bring people together. Moreover, Morocco has many beautiful places: you can see the blue streets of Chefchaouen, the golden dunes of Merzouga and the snowy peaks of the Atlas Mountains in the same trip. Another special thing is our festivals and traditions. For example, the Rose Festival in Kelaat M'Gouna and the Moussem of Tan-Tan show how rich and varied our culture is. Finally, Moroccans are welcoming and generous, and visitors always feel at home. For all these reasons, Morocco is truly special, and I invite everyone to discover it.
